Dear Khakan,

Thanks for the update.

I executed another test and except the image annotation it seems at least the same functions are being called. However getting to similar/same results across Wishlist/Surplus remains a wish. Please find my testing results attached to the email.

- Identification - **Works largely**
 - Input 2-4 images
 - Expected Output: brand/model
 - Pricing - just AI **guesses no actual market data used**
 - input: Brand Model
 - Output: pricing range for New/Used/Refurbished
 - Debugging: Search Query; Source of data URLs
 - Manual - **works in Surplus (until PDF selectin) NOT in Wishlist - different results**
 - Input: Brand Model
 - Output: user manual Pdf or at least the URL
 - Debugging: search Query, source of URL
 - Alternative offers/Matching (lowest Prio) - **Not implemented?**
 - Top 3 SALES offers

However for the Manual search the Wishlist and the Surplus still seems to deliver wildly different results for the supposed same search query.

Wishlist:

... 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 ...

I assume this can be linked to the lack of general Model/Brand validation in the site of Wishlist/Surplus. Only if the correct Strings are entered the search results will deliver valuable results to my opinion.

Although there is incremental progress again 3 weeks have passed according to the history. So as you have been saying this is not a highly project for you what is keeping this project from succeeding.

After 3 months I am clearly doubting how effective this is. As outlined previously I have serious doubts that this project will succeed within November in terms of accomplishing the BASIC functionalities. Besides the Image recognition this is mainly about search queries on google and getting the right information into the system.

If these key functionalities dont work within November i.e. before Friday I will discontinue the project. I commit to a maximum of two additional tests for the outlined core functionalities. It is clear what customer testing I am executing and this does not need my direct involvement. If this is a topic of resource limitation - let me know.

Best
Wieland
